Proposed Solution

Date	2 October 2026
Team ID	6abca5b16f395c49751f124d
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	2 Marks

Proposed Solution Overview

LegalEase is proposed as an AI-powered legal-document drafting assistant. Users provide the document type, parties, terms and effective date through a Streamlit interface. FastAPI validates the request and sends structured instructions to Google Gemini. The generated draft is returned to the frontend, where it can be reviewed, edited and exported as TXT, DOCX or PDF.

Core Capabilities

- Generate document-specific drafts rather than one fixed template.
- Support Employment Contract, NDA, Residential Lease, Service Agreement, General Contract, Offer Letter and Custom Document.
- Preserve user control through editable preview before download.
- Create professional DOCX and PDF output and simple TXT output.
- Use placeholders for important missing facts rather than inventing them.
- Protect API credentials through environment configuration.
- Display a clear disclaimer that generated drafts are not legal advice.

Expected Outcome

The solution reduces repetitive drafting and formatting work while demonstrating a practical Generative-AI workflow that connects a web frontend, API backend, AI service and document-generation utilities.
