Model Selection & Architecture Design

Date	2 October 2026
Team ID	6abca5b16f395c49751f124d
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	Project Deliverable

Model Selection

The supplied project specification originally references Gemini 1.5 Pro. For the implementation, the model should be configured through an environment variable and use a currently supported Google Gemini text-generation model available to the project API key. This avoids coupling the application to an obsolete model name.

Selection Criteria

- Strong long-form text generation for structured documents.
- Ability to follow detailed document-specific instructions.
- Reliable integration through the current Google GenAI Python SDK.
- Suitable latency and cost for an interactive college project.
- Model name configurable without changing application logic.

Important Design Rule

The application must not use hard-coded legal drafts while presenting them as AI output. Static formatting templates may be used only for layout. The actual generated draft should come from Gemini when Generate Document is selected.
