Testing & Evaluation

Date	2 October 2026
Team ID	6abca5b16f395c49751f124d
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	Project Deliverable

Functional Testing Strategy

Testing should verify the complete required workflow without consuming unnecessary Gemini quota. Most automated tests should mock the Gemini service, while an optional explicitly enabled live test verifies real API connectivity.

Test Area	Evaluation
API Routes	Root/health respond; /generate accepts valid request and rejects invalid request.
AI Service	Mocked success returns generated draft; failure produces controlled error.
Input Validation	Required fields and invalid values are handled.
Editing	Downloads use latest edited text, not stale original response.
TXT Export	Readable UTF-8 output.
DOCX Export	File opens and contains structured content.
PDF Export	File opens; long text wraps and continues across pages.
Security	API key is not committed or printed.
Live Gemini	One optional controlled generation verifies real model access.

Evaluation Boundary

Because no final Antigravity execution report was supplied for this documentation step, this document defines the required testing and evaluation criteria and does not fabricate pass counts or measured response times.
