Project Report

Date	2 October 2026
Team ID	6abca5b16f395c49751f124d
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	

1. INTRODUCTION

1.1 Project Overview

LegalEase is an AI-powered legal-document generator designed to help users create customizable document drafts from structured inputs. It targets use cases such as employment contracts, NDAs, residential leases, service agreements and other custom documents. The proposed implementation uses Streamlit for the user interface, FastAPI for the backend, Google Gemini for generation, and dedicated export utilities for TXT, DOCX and PDF.

1.2 Purpose

The project demonstrates how Generative AI can reduce repetitive document drafting and formatting while keeping the user in control through an editable preview and multi-format export.

2. IDEATION PHASE

The core problem is that users often rely on generic templates and manual editing to prepare document drafts. Brainstorming prioritized contextual AI generation, structured input, editing, exports, validation and GitHub-safe configuration.

3. REQUIREMENT ANALYSIS

Functional requirements include document input, Gemini generation, preview/editing, multiple document types, and TXT/DOCX/PDF export. Non-functional requirements include usability, security, maintainability, reliability and clear legal-safety messaging.

4. SYSTEM DESIGN

User → Streamlit
↓
FastAPI /generate + Pydantic
↓
Gemini Service → Google Gemini

↓
Generated Draft
↓
Editable Preview
↓
TXT / DOCX / PDF

5. IMPLEMENTATION

The frontend gathers the document type, parties, terms and effective date. FastAPI validates and orchestrates the request. Gemini generates the draft. The user can then edit the response, and export utilities format the latest edited version into the selected file type.

6. TESTING

Testing covers API validation, mocked Gemini success/failure, export correctness, edited-content persistence, filename safety and an optional live Gemini connectivity test. Final measured results should be recorded from the completed build rather than assumed.

7. LIMITATIONS

- AI-generated drafts may contain omissions or inappropriate clauses for a particular jurisdiction.
- LegalEase does not replace qualified legal advice.
- Generation depends on internet connectivity, API availability and quota.
- The quality of the draft depends on the completeness and clarity of user input.
- The current project focuses on drafting rather than authoritative legal-database verification.

8. FUTURE ENHANCEMENTS

- Jurisdiction-aware clause libraries and legal-database integration.
- Document comparison and clause-risk analysis.
- User accounts and secure document history with explicit privacy controls.
- Multilingual drafting and translation.
- Digital-signature workflow and version tracking.

9. CONCLUSION

LegalEase combines a guided web interface, FastAPI backend, Gemini-based generation and professional export utilities into a practical Generative-AI document-drafting workflow. Its value is in faster customization and formatting while maintaining user review and clearly communicating that generated content is a draft, not guaranteed legal advice.
