Project Demonstration Plan

Date	2 October 2026
Team ID	6abca5b16f395c49751f124d
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	

Project Demo Planning

Prepare a concise end-to-end demonstration showing the problem, project structure, Gemini integration, live document generation, editing and export. The source repository should be GitHub-ready with secrets excluded.

Suggested Demo Sequence

1. Introduce LegalEase and the problem it solves.
2. Briefly show the project structure and FastAPI/Gemini modules.
3. Open the Streamlit interface and select a document type.
4. Enter parties, terms and effective date.
5. Generate the document and show the AI-produced draft.
6. Edit one clause to demonstrate user control.
7. Download the latest version as TXT, DOCX and PDF.
8. Open one formatted output briefly.
9. Conclude with architecture, limitations and legal disclaimer.

Team Demonstration Responsibility

Team Member	Suggested Demonstration Responsibility
Hemanthkumar J (Team Leader)	Project overview, architecture and final integration
Harish K	Streamlit frontend and input workflow
Jagan K	FastAPI backend and Gemini generation flow
Jayaprasath U	Editing and TXT/DOCX/PDF export
Jayavel V	Testing, GitHub readiness, limitations and conclusion

Communication

Keep the explanation focused on the working flow. Do not expose the .env file or Gemini API key. Describe outputs as AI-generated legal-document drafts and avoid claiming guaranteed legal validity.
